Portfolio: aimanasyraaf.site

Computer Science undergraduate specializing in Netcentric Computing with hands-on experience in software development, networking and IoT systems through academic projects and industry experience. Proficient in Flutter, Firebase, OpenAI API integration, ESP8266, GPS technologies and network infrastructure. Experienced in network installation, configuration and troubleshooting through industry placement at Infradata Technology. Passionate about developing practical technology solutions and eager to contribute to mobile application development, semiconductor technologies, data analytics and software engineering projects.

EDUCATION

BACHELOR OF COMPUTER SCIENCE (HONS.) NETCENTRIC COMPUTING

Universiti Teknologi MARA (UiTM) | Kampus Jasin, Melaka

OCTOBER 2024 – PRESENT

- Current CGPA: 3.53
- Expected Graduation: February 2027
- Relevant coursework:
Mobile Application Development, Software Engineering, Database Systems, Computer Networks, Network Security

DIPLOMA IN COMPUTER SCIENCE

Universiti Teknologi MARA (UiTM) | Kampus Kuala Terengganu, Terengganu

MARCH 2021 – AUGUST 2024

- Graduated: September 2024
- Relevant coursework:
Web Application Development, Database Systems, Object-Oriented Programming, Computer Networks

WORK EXPERIENCE

NETWORK INSTALLATION ASSISTANT

Infradata Tech | Kuala Berang, Terengganu

MARCH 2024 – OCTOBER 2024

- Installed and configured routers, switches, and wireless access points for enterprise network deployments.
- Performed network troubleshooting, connectivity testing, and maintenance to ensure reliable network performance.
- Assisted in structured cabling, rack installation, and network infrastructure deployment at client sites.
- Supported engineers during on-site implementation and technical support activities.
- Continued employment after internship completion to provide ongoing network support and project assistance.

PROJECTS

AI REPAIR ASSISTANT MOBILE APPLICATION

- Developed a cross-platform mobile application using Flutter and Firebase for diagnosing appliance issues and assisting users with repair solutions.
- Integrated the OpenAI API to provide AI-powered troubleshooting through both chat and image-based diagnosis.
- Implemented Firebase Authentication, Cloud Firestore, geolocation services and technician search functionality.
- Developed features for locating nearby repair shops and assisting users in purchasing replacement parts online.
- Designed an intuitive user interface focused on improving the repair experience for non-technical users.

SMART NAVIGATION CANE FOR VISUALLY IMPAIRED INDIVIDUALS

- Designed and developed an IoT-based assistive device using ESP8266, GPS, ultrasonic sensors, vibration motor and buzzer.
- Implemented real-time obstacle detection through vibration and audible feedback.
- Developed emergency alert and GPS tracking features integrated with Blynk Cloud for caregiver monitoring.
- Implemented cloud-based location logging and real-time notifications for enhanced user safety.
- Focused on improving mobility and independence for visually impaired individuals through assistive technology.

SKILLS

Programming Languages

- Dart
- Java
- C++
- SQL

Frameworks & Technologies

- Flutter
- Firebase
- OpenAI API
- Git
- GitHub

Networking

- Router Configuration
- Switch Configuration
- Wireless AP Setup
- Network Troubleshooting

IoT & Embedded

- ESP8266
- GPS Integration
- Blynk
- Ultrasonic Sensor

TECHNICAL COMPETENCIES

- REST API Integration
- Firebase Authentication
- Cloud Firestore
- GPS & Geolocation
- Mobile UI Development
- IoT System Development
- AI Integration
